Safe Harbour Disclaimer

This presentation may contain “forward-looking” statements within the meaning of Canadian securities legislation and the United States Private Securities Litigation Reform Act of 1995. Forward-looking statements relate to future events or the anticipated performance of the Company and reflect management’s expectations or beliefs regarding such future events and anticipated performance. In certain cases, forward-looking statements can be identified by the use of words such as “plans”, “expects”, “is expected”, “budget”, “scheduled”, “estimates”, “forecasts”, “intends”, “anticipates” or “believes”, or variations of such words and phrases or statements that certain actions, events or results “may”, “could”, “would”, “might”, or “will be taken”, “occur” or “be achieved”, or the negative of these words or comparable terminology. By their very nature forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual performance of the Company to be materially different from any anticipated performance expressed or implied by the forward-looking statements. Such factors include various risks related to the Company’s operations, including, without limitation, fluctuations in spot and forward markets for silver and other metals, fluctuations in currency markets, changes in national and local governments in Guatemala and the speculative nature of mineral exploration and development, risks associated with obtaining necessary exploitation and environmental licenses and permits, and the presence of laws that may impose restrictions on mining. A complete list of risk factors are described in the Company’s preliminary prospectus and will be detailed from time to time in the Company’s interim and annual financial statements and management’s discussion and analysis of those statements, all of which are, or will be available, for review on SEDAR at www.sedar.com.

This presentation uses the terms “measured resources”, “indicated resources” and “inferred resources”. The Company advises readers that although these terms are recognized and required by Canadian regulations (under National Instrument 43-101 Standards of Disclosure for Mineral Projects (“NI43-101”)), the United States Securities and Exchange Commission does not recognize them. Readers are cautioned not to assume that any part or all of the mineral deposits in these categories will ever be converted in to reserves. In addition, “inferred resources” have a great amount of uncertainty as to their existence, and economic and legal feasibility. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. Under Canadian rules, estimates of inferred mineral resources may not form the basis of feasibility or pre-feasibility studies, or economic studies, except for a Preliminary Assessment as defined under NI43-101. Investors are cautioned not to assume that part or all of an inferred resource exists, or is economically or legally mineable. The Escobal Preliminary Assessment is preliminary in nature and includes inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves and there is no certainty that the preliminary assessment will be realized.

Although the Company has attempted to identify important factors that could cause actual performance to differ materially from that described in forward-looking statements, there may be other factors that cause its performance not to be as anticipated. The company neither intends nor assumes any obligation to update these forward-looking statements or information to reflect changes in assumptions or circumstances other than required by applicable law. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those currently anticipated. Accordingly, readers should not place undue reliance on forward-looking statements.

Unless otherwise indicated, all dollar values herein are in US\$.

Executive Team – Proven Track Record

▲ Kevin McArthur, President, CEO and Director

- ▲ Former CEO of Goldcorp , Glamis Gold during Marlin discovery, construction and operation
- ▲ Mine-building and operations experience in Latin America, including Guatemala

▲ Ron Clayton, VP and COO

- ▲ Former Senior VP Operations for Hecla Mining
- ▲ Extensive background in underground mine development and operations

▲ Jaime Mondragón, VP and CFO

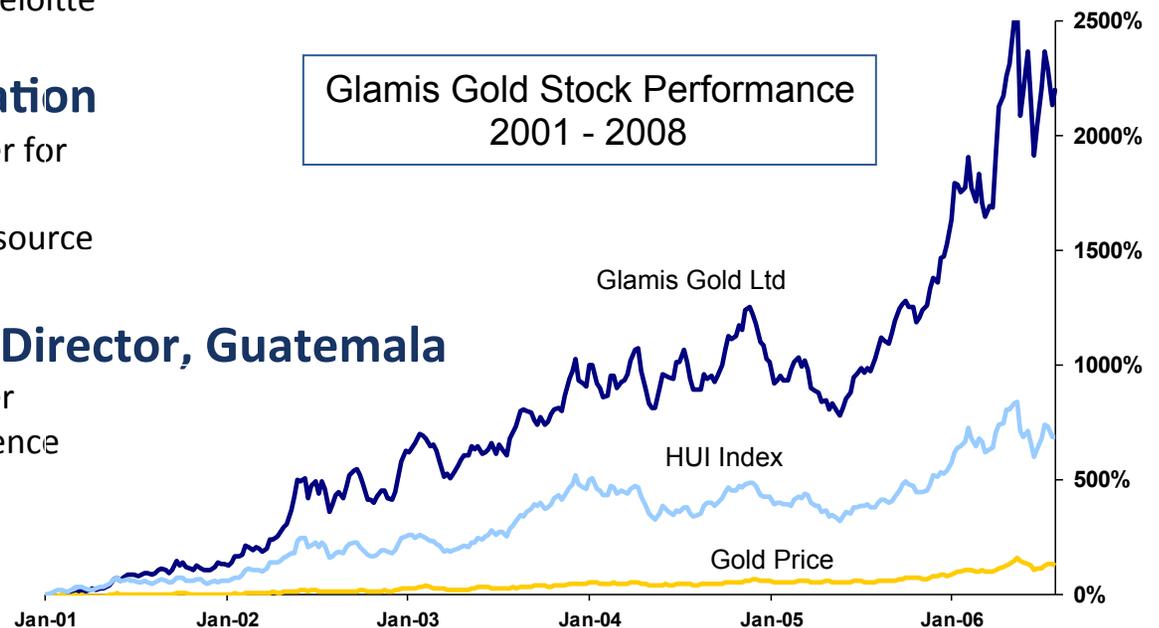

- ▲ Former Latin America Controller for Glamis Gold, including Guatemala Controller
- ▲ Audit experience with KPMG, Deloitte and its predecessor companies

▲ Brian Brodsky, VP Exploration

- ▲ Guatemala Exploration Manager for Glamis Gold/Goldcorp
- ▲ Credited with tripling Marlin resource and the Escobal Discovery

▲ Sergio Saenz – Managing Director, Guatemala

- ▲ Former Marlin General Manager
- ▲ Broad Central American experience

Escobal Project

Escobal Attributes

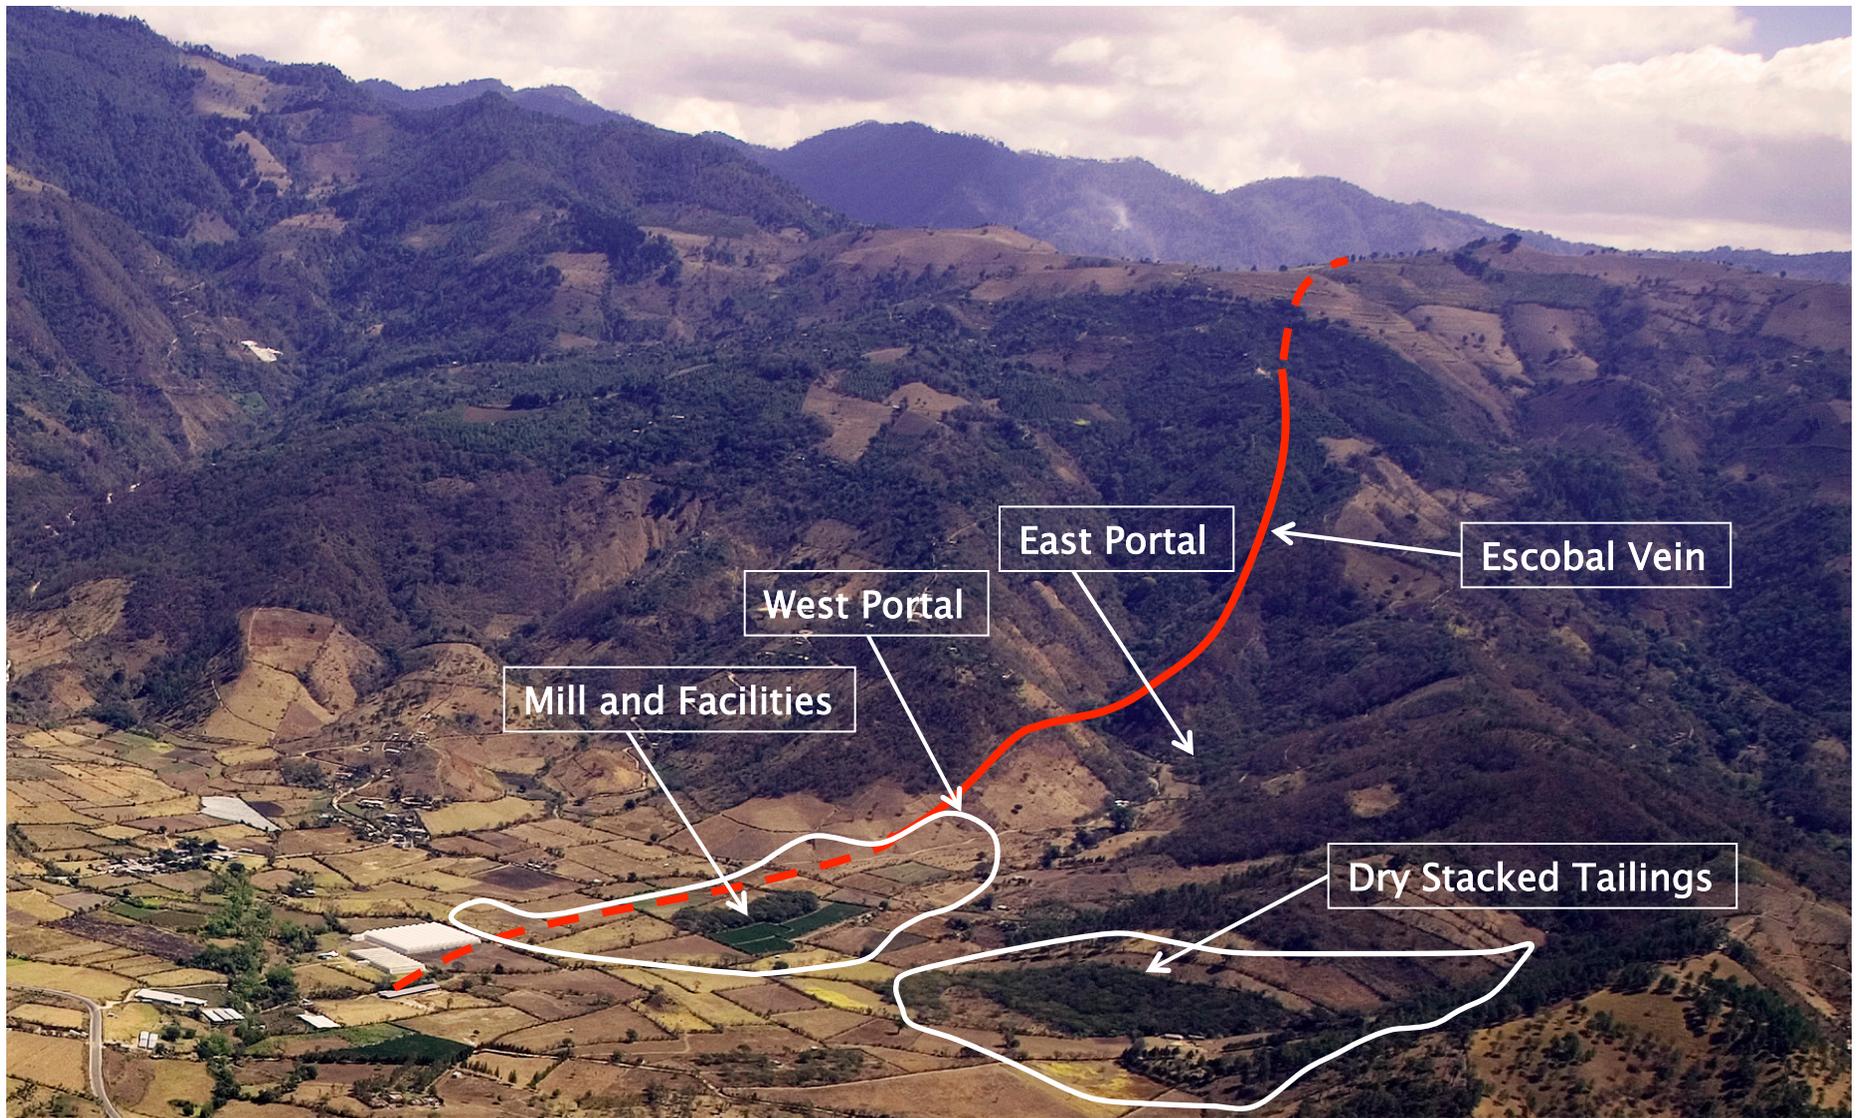

- ▲ Large, high grade resource
- ▲ Open along strike and at depth
- ▲ Dominant land position—2000 sq km
- ▲ Regional growth potential
- ▲ Robust economics
- ▲ U/G development underway
- ▲ Excellent infrastructure

Guatemala

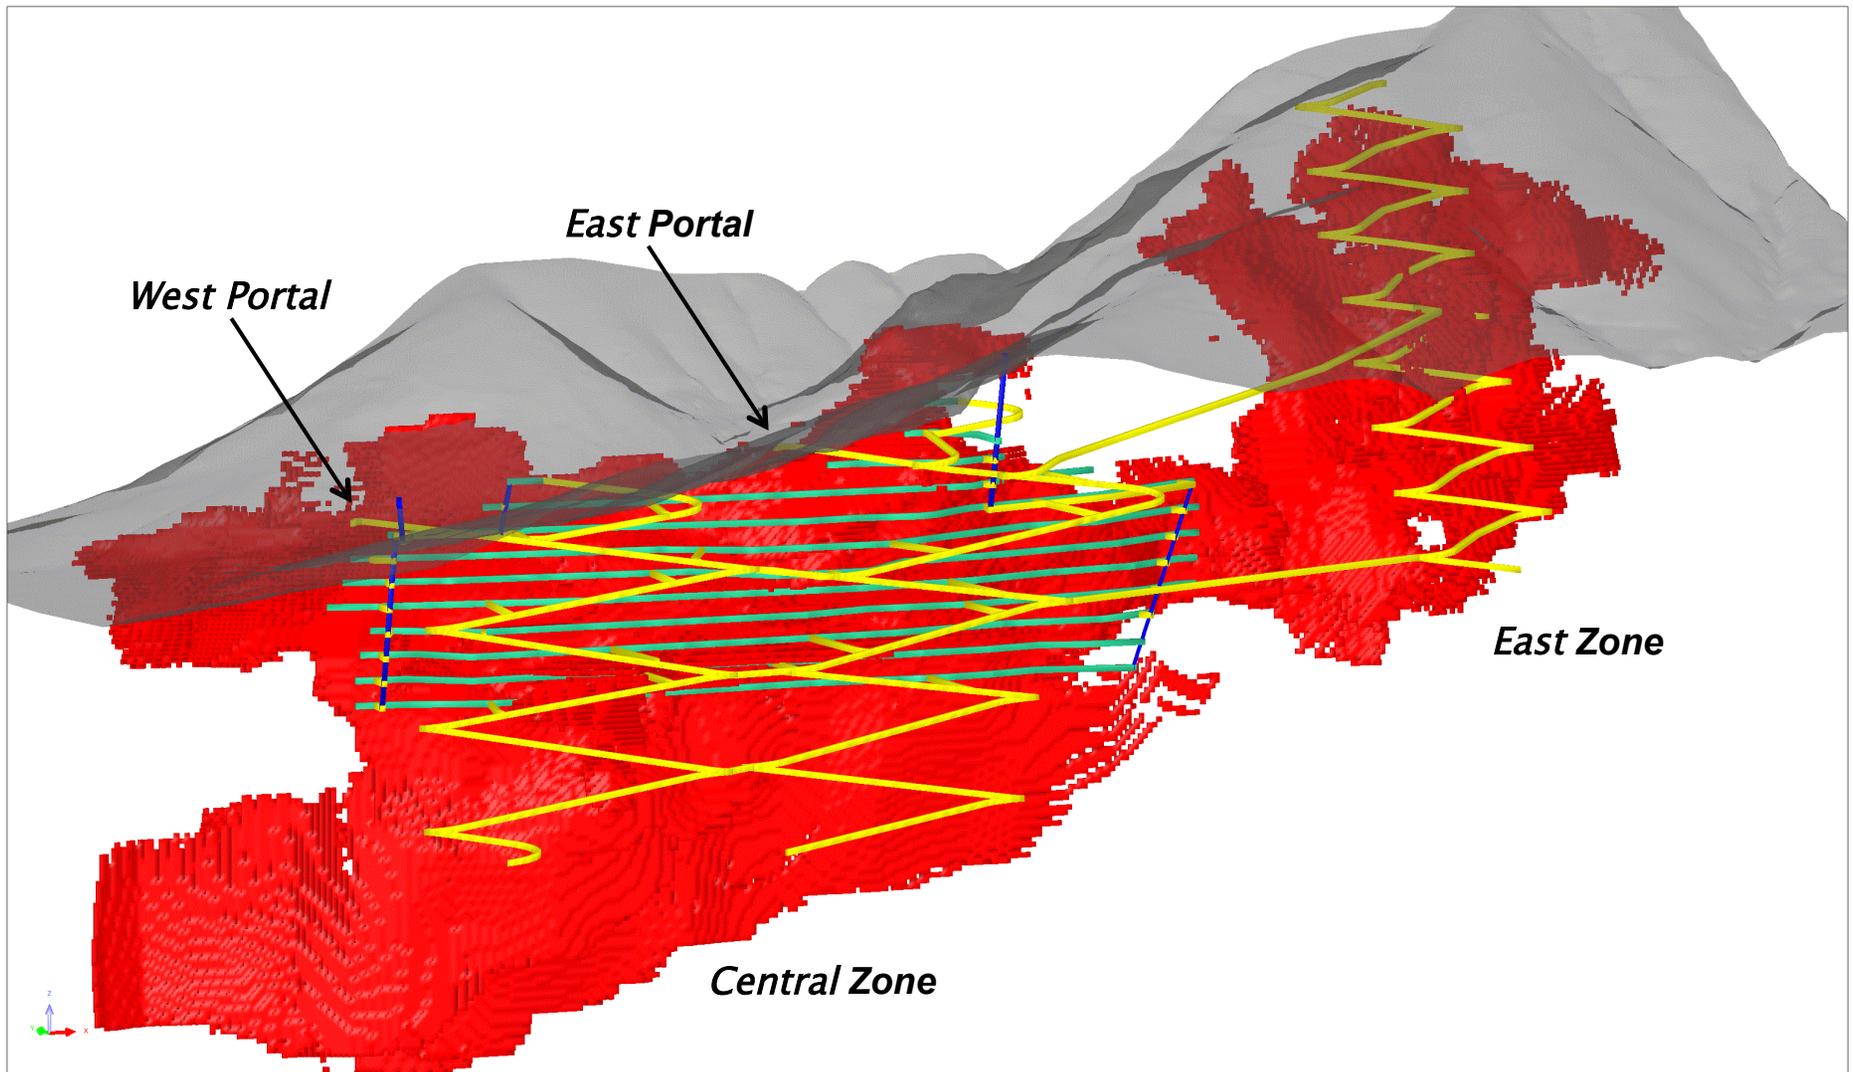

- ▲ Resource-rich country
- ▲ Strong government encouragement
- ▲ Escobal located in region supportive of mineral development

Sustainable Development

CORPORATE COMMITMENT

Tahoe Resources responsibly provides long-term value through sustainable economic and social development in the communities where we operate. We are committed to balancing the concerns of all primary stakeholders.

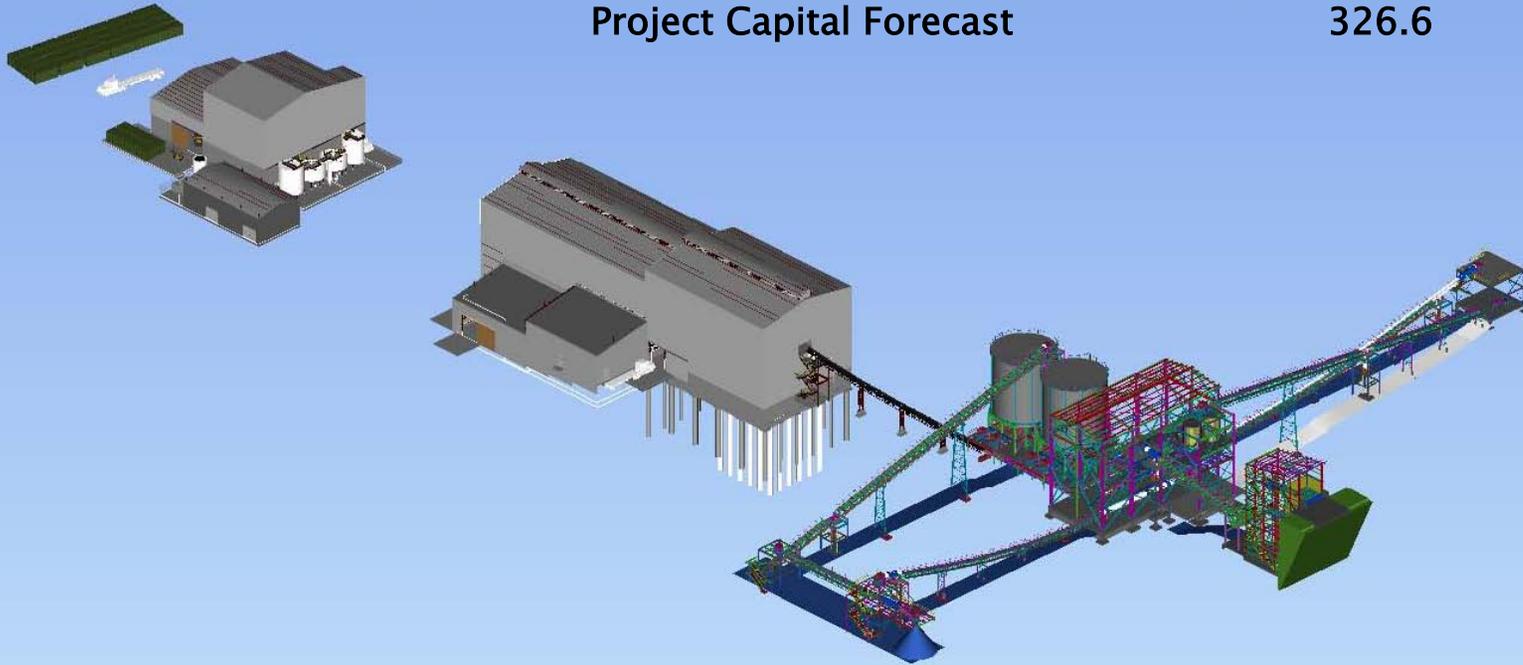

- ▲ Develop sustainable programs
- ▲ Invest in partnerships
- ▲ Maximize community relations
- ▲ Promote open communication
- ▲ Practice environmental excellence
- ▲ Provide a healthy and safe workplace

2011 Milestones

- Exploration EIA approval 1Q 2011
- Detailed engineering begins Jan 2011
- Temporary surface construction begins Mar 2011
- Portals complete and drifting commenced 2Q 2011
- 2011 total underground development +1,600 metres
- EIA for powerline approved/commence construction 3Q 2011
- EIA for exploitation complete and submitted 2Q 2011
- Exploitation license – earliest possible timeline 3Q 2011
- Procurement of major plant equipment 2Q 2011
- Primary development equipment on site 2Q 2011
- Plant construction begins – earliest possible timeline 4Q 2011
- Complete project optimization 2012

Tahoe Details – June 30, 2011

▲ Total Shares Outstanding:	143.1 million
▲ Fully Diluted	148.1 million
▲ Average Trading Volume	246,000 shares/day
▲ Total Cash and Term Deposits	\$435.6 million
▲ Debt	-nil-
▲ Market Capitalization	\$2.67 billion
▲ Enterprise Value	\$2.24 billion

Why Tahoe?

- ▲ Simple business model – maximize Escobal NAV
 - +20 Moz silver per year
 - Total cash cost <\$3.00 per silver ounce
 - 18 year mine life at the base case 3,500 tpd
 - Substantial geologic upside
 - Robust cash flow and dividends potential
- ▲ Experienced management team with proven mine–building track record
- ▲ Company is fully funded – no need for further financing
- ▲ Focus on delivering long–term shareholder value
